Dear Colleagues and Friends:

The American Academy of Chiropractic Physicians is an organization that was formed in 1999 by chiropractic medical schools and leaders within the chiropractic profession that specifically support the rights of patients to select and have access to properly trained and credentialed health care providers of their choice. We support and are actively engaged in protecting the ability of health care providers to practice to the extent of their education, qualifications, licensing and legal authorization.

We continue to grow nationally and support the Coalition for Patients' Rights in representing professional health care providers of direct patient care.
